Own Ideas

- It is possible to propose your own papers.
- If you have a proposal, please approach me as soon as possible so that I can integrate the proposal into the semester plan as effectively as possible.

References

- Elhage et al. (2022)
 - fundamental investigations of superposition
 - toy models to understand behavior
 - How do they behave and why?
- Gurnee et al. (2023)
 - sparse linear classifiers (probing) to examine individual neurons
 - What responsibilities do neurons in different layers have?
 - interesting case studies
 - mono- vs. polysemanticity

Othello

- Li et al. (2023)
 - Othello: board game
 - linear and non-linear probing to discover game states
 - “Can we understand what a model represents and what does it represent?”
 - The model seems to have a non-linear representation of the board.
- Nanda, Lee, et al. (2023)
 - more probing for the same task
 - The model seems to have a linear representation of the board.
